

Be **Green**, burn **Clean**, and **Save!**

Crystal's frequencies in the **Fuel Structurer** decreases the surface tension of the fuel, which results in smaller droplets that increases the surface area exposed to air for combustion.

This lead to faster, more effective combustion, increased fuel efficiency and engine performance, the fuel burn in the power-stroke and not partially in the exhaust stroke (fuel burned in the exhaust stoke contributes nothing to power or fuel performance.)

The Fuel Structurer is made from rubber infused with powdered quartz crystals programmed at the right frequency to structure fuel.

Advantages of fuel and oil structuring

Faster combustion, more power.

Efficient combustion saves fuel.

Improves lubrication.

Reduces friction.

Reduces oil consumption

Reduces emissions.

More efficient cooling.

Prolongs engine life.

Reduced Freezing temperature of radiator water. (-6 C)

The Fuel Structurer kit comes in two rubber strips. The strips are to be strapped around the outside of the air intake hose and top radiator hose, without any modification to the wiring harness, air intake, hoses or any other part of the engine.

The kit can be fitted to any vehicle; **Petrol or diesel**: cars, trucks, tractors and earthmoving machines etc.

Although the complete fuel savings benefits are only achieved after four weeks, the improved responsiveness can be felt immediately after fitment.

What to expect from your Fuel Structurer:

Lifelong fuel and oil savings and improved performance.

Fuel savings:

Depending on the vehicle design fuel savings can be expected to be from 10 to 15%.

Lubrication.

Improved lubrication reduces oil consumption and reduced emissions.

Performance:

Increased responsiveness.

Engine runs smoother and **cooler, prolonging engine life.**

Temperature:

The engine runs cooler due to reduced friction and improved cooling

Freezing:

Due to the lowered freezing temperature of the water the engine wont freeze if temperatures are above -6 C

Guarantee: The Fuel Structurer is not affected by climate or any external factors, it has no moving parts and is guaranteed for a *lifetime* without ever having to be serviced or replaced as long as it is kept in good condition.

Installation: Fitting the Fuel Structurer does not require any modifications and comes in a DIY-kit with easy to follow instructions.
