Water Strukturering

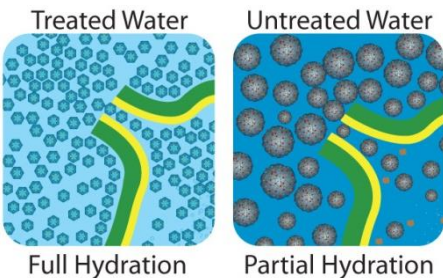

Spaar water & verbeter gesondheid en produksie.

Dr. Gerald Pollack van Universiteit van Washington, 'n Professor in Bioingeneerswese, het water se struktuur bestudeer en tot die volgende insigte gekom;

Water bou 'n geheue op na aanleiding van die omgewing waaraan dit blootgestel word. Die geheue sowel as besoedeling dra by tot die vorming van groter water molekule groepe. Hierdie groepe is té groot om effektief deur sel wande te beweeg en dit gee aanleiding tot dehidrasie en swak gesondheid selfs wanneer voldoende water beskikbaar is.

Die beginsel van bewaring van energie bring mee dat water molekules sal groepeer sodra die energie vlakke daal, weens bv. besoedeling. Om die molekules weer op te breek om afsonderlik te funksioneer moet energie toegevoeg word.

Dr. Pollack het bevind daar is hoofsaaklik drie metodes om water te struktureer; deur 'n vortex, met magnetisme of met frekwensies.

Hierdie struktureering

bring mee dat water beter deur selle opgeneem kan word. Nie plant, mens of dier selle kan die groepeerings opneem nie. Die enkel water molekules het 'n laer oppervlakte spanning en 34% meer waterstof bindings plek, dus los voedingstowwe beter op en beide water en voedingstowwe word beter en makliker deur die sel opgeneem, ongeag of dit in mense, plante of diere is.

Gestruktureerde water help met die oordrag van boodskappe vanaf die brein na die sel, Water met 'n hoë oppervlakte spanning is nie toeganklik vir die sel nie

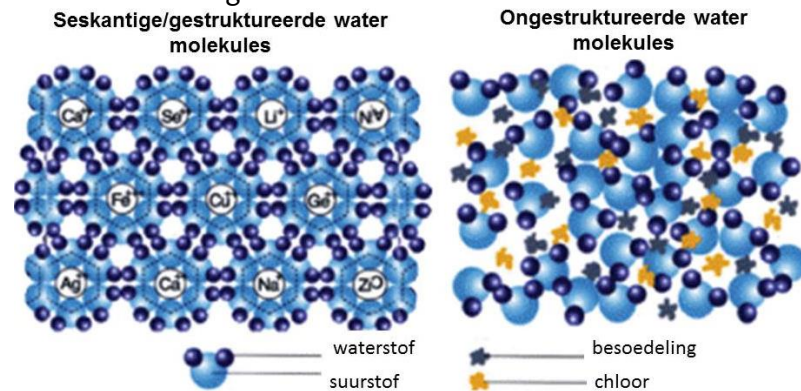

en laat plante vrek, soos bv. Mikrogolf water wat plante laat vrek.

Gestruktureerde water het tot gevolg dat plante, diere en mense minder water gebruik en beter hidreer. Die struktuur van die gestruktureerde water het tot gevolg dat die water molekules meer suurstof vashou. Ons ken water as H_2O maar gestruktureerde water vorm H_3O_2 . Dr Pollac verwys eintlik na gestruktureerde water as nog 'n fase van water, een waarvan ons nooit op skool geleer het nie (ons ken net ys, vloeibare water en waterdamp). Die feit dat gestruktureerde water meer suurstof bevat is van kardinale belang vir goeie gesondheid, dit verhoog ook groei en produksie by plante en diere.

Gestruktureerde water bly vloeibaar op temperature so laag as $-6^{\circ}C$. Dit bied tot 'n mate beskerming teen ryp skade by plante. Dit is 'n natuurlike anti-oksidant wat veroudering teenwerk en makliker geabsorbeer word deur die selwande.

Ons het na aanleiding van verskeie toetse besluit om van die frekwensie metode gebruik te maak vir die struktureering, aangesien ander genesende frekwensies ingevoeg kan word om verdere gesondheids voordele te verkry. Ons water struktureerders is 'n mobiele eenheid wat mens bloot onder 'n glas water plaas om dit te struktureer, of dit kan om die omtrek van 'n pyp vasgeheg word om al die water wat deur die betrokke pyp vloei te struktureer. Die struktureerders moet ten minste 80% van die omtrek van die pyp bedek vir effektiewe werking. Soos die water deur die pyp beweeg, hetsy 'n huishoudelike pyp of om 'n besproeiings pyp, word die water dadelik gestruktureer. Om stilstaande water te struktureer neem sekondes maar vloeiende water struktureer in milli sekondes.

Sien voordele van gestruktureerde water op bl 3.

Water Structuring

Save water while improving health and production.

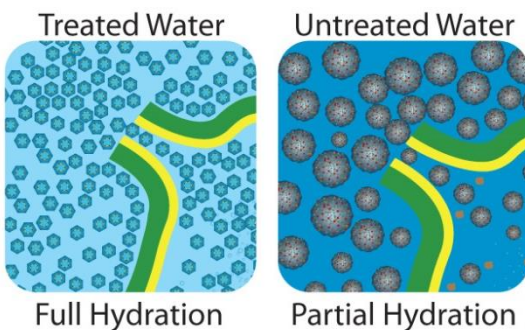

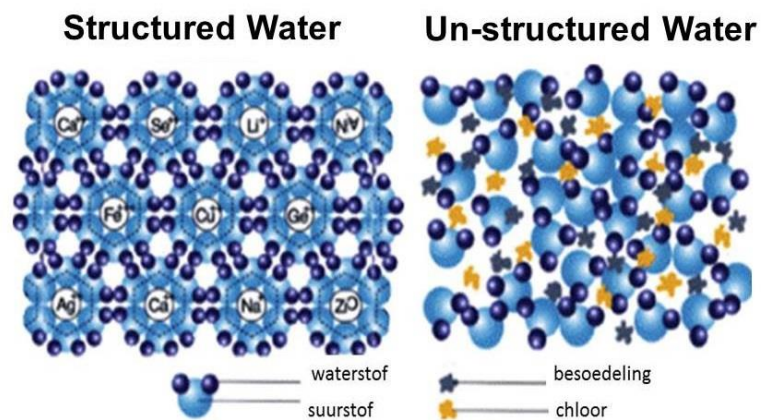

Dr. Gerald Pollack, from the University of Washington, studied the structuring of water molecules and came to the following conclusion:

Water builds up a memory based on the environmental conditions it is exposed to. This memory and the fact that the water is polluted to some or other degree leads to the water molecules forming groups/clusters. These clusters of water molecules are too big to go through cell walls for absorption and therefore lead to dehydration and even poor health even though enough water is available.

Because the water wants to save on energy it starts forming water clusters when exposed to pollutants for example. In order for the water to be absorbed by cells the clusters will need to be broken down into individual molecules. Neither plants nor humans or animals can absorb the clusters of water molecules. Dr. Pollack discovered that there are three different ways to structure the water molecules: through a vortex, with magnetism or through frequencies.

Individual molecules have a lower surface tension and 34% extra hydrogen bonding space, therefore nutrients dissolve better and the absorption of water and nutrients in humans, animals and plants are better. Structured water aids in the transfer of information from the brain to the cell.

Water with high surface tension is not available to the cell and let plants die, like microwave water.

Making use of structured water means plants, animals and humans use less water and are better hydrated. Because of the way in which the water molecules are structured, they are able to hold on to more oxygen. Normal water is known as H_2O but structured water forms H_3O_2 . Dr. Pollack actually referred to structured water as another phase of water, something we never learnt at school. (We only know of ice (solid), flowing water (liquid) and vapor (gas).) The fact that structured water contains more oxygen is extremely important in terms of human, plant and animal health as well as for growth and production in plants and animals.

Structured water remains in the liquid form up to $-6^{\circ}C$. This allow for some frost damage protection in plants. It is a natural anti-oxidant that combats aging and is easily absorbed through cell walls.

Agri Frequencies tried and tested the different methods and combinations thereof to see what the most effective way to structure water is. The result was to make use of frequency. The water structuring units designed by us are mobile and can either be placed under a glass of drinking water or around a pipe, ensuring all the water coming through the pipe is structured. When placing the structuring units around a pipe it needs to cover at least 80% of the circumference of the pipe, to ensure the water will be structured as it goes through the pipe. When a glass of water is placed on the structuring unit it can take up to eight seconds for the still standing water to be structured, whereas flowing water is structured in milli-seconds.

See page 3 for the advantages of structured water.

Voordele van Gestruktureerde Water / Advantages of Water Structuring

GESONDHEID / HEALTH

- Verbeterde algemene gezondheid en immuun stelsel / *Improved general health and immune system.*
- Verhoog energie vlakke / *Higher energy levels*
- Verbeter kort termyn geheue / *Improve short term memory*
- Verhoog bloed suurstof inhoud H₃O₂ / *More oxygen in the blood H₃O₂*
- Natuurlike antioksidant wat veroudering teenwerk / *Natural anti-oxidant that combats aging*
- Effektiewe hidrasie 3 maal viniger as gewone water/ *Effective hydration 3 times faster than normal water.*
- Talle simptome verdwyn soos byvoorbeeld hoofpyn, sooi-brand, stywe gewrigte ens. / *Many reported that symptoms like headaches and heartburn disappear*
- Verbeter kommunikasie tussen die sel en die brein. / *aids in the transfer of information between the cell and the brain.*
- Ontgif die ligaam / *Detoxify the body*
- Verbeter sirkulasie / *Improves circulation*
- Teen histamine verminder pyn / *anti histamine reduces pain.*

pH

- Strukturering verander die pH van die water / *Structured water changes the pH of the water*

DIERE / ANIMALS

- Verbeter algemene gezondheid / *Improve general health*
- Verhoogde energie vlakke / *Higher energy levels*
- Verbeter melk en vleis produksie / *Improve meat and milk production*
- Water besparing tot 30% / *Saving up to 30% water*
- Beter vleis kwaliteit met beter vet verspreiding / *Improved meat quality and better fat distribution*

HOENDERS / CHICKENS

- Verbeter algemene gezondheid / *Improve general health*
- Verbeter produksie tot 12% / *Production can improve up to 12%*
- Water besparing tot 30% / *Saving up to 30% water*
- Minder vog in huise wat lei tot minder siektes en sterftes / *Less moisture in the houses means less diseases and mortalities*
- Verhoogde vleis kwaliteit / *Improve meat quality*

PLANTE / PLANTS

- Verhoog produksie tot 35% / *Production can increase with up to 35%*
- 'n Mate van beskerming teen ryp skade tot en met -6°C / *A degree of frost protection up to -6°C*
- Bespaar tot 30% water / *Saving up to 30% water*
- Verbeter kwaliteit / *Quality of produce improves*

Agri Frequencies (PTY) Ltd

Box 11551, Rynfield 1514, Benoni
082 429 4055

info@agrifrequencies.com
www.agrifrequencies.com

- Verbeter smaak en raklewe van groente en vrugte / *Taste and shelf-life improves*
- Verhoog brix (suiker) inhoud / *Increased brix (sugar) content*
- Verbeter plant weerstand teen insekte en siektes / *Better resistance to insects & diseases*

LUSERN & HOOI / *LUCERN & HAY*

- Produksie kan tot 35% verhoog / *Production can increase up to 35%*
- Spaar tot 30% water / *Saving up to 30% water*
- Verhoog kwaliteit / *Improve quality*
- Verhoog suiker inhoud / *Increase sugar content*
- Spaar tot 50% op drogings tyd / *Save up to 50% on drying time*

GROND / *SOIL*

- Beter absorpsie / *Better absorption*
- Stabiliseer grond pH / *Stabilizing soil pH*
- Loog brak en soute uit grond uit / *Leaching of salts*
- Grond organismes word gestimuleer vir beter opbrengste / *Soil organisms are stimulated for better yields*

BETON & SEMENT / *CONCRETE & CEMENT*

- Bespaar tot 30% water / *Water savings of up to 30%*
- Verbeter sterkte tot 40% / *Improve strength up to 40%*
- Gebruik tot 10% minder sement vir dieselfde sterkte / *Use up to 10% less cement for the same strength*
- Die beton het baie beter weerstand teen natuurelemente / *Cement has better resistance to the elements of nature*
- Korter drogings tyd / *Shorter drying time*

PYPE & KETELS / *PIPES & KETTLES*

- Los aanpaksels op in pype en ketels / *Dissolve deposits in kettles and pipes*

WATER SUIWERING / *WATER PURIFICATION*

- Onopgeloste stowwe sak makliker uit, wat suiwering vergemaklik / *Solids are normally suspended in the clusters, with the clusters gone the solids will sink to the bottom.*

WAARBORG / *GURANTEE*

Die water struktureerder is lewenslank gewaarborg, mits die installasie aan die voorgeskrewe vereistes voldoen.
The water structurers have a life-long guarantee as long as you adhere to the prescribed requirements.
